556 578 472 The attitude toward success in agriculture indicated by the foregoing is held in some measure toward marked success in other professions, but in lesser degree, except perhaps where trading is taken up individually or by two persons in partnership. One of the earliest observers, Pinheiro de Lacerda (*c.* 1790), noted that accusations of witchcraft were most often levelled at the wealthier members of the community.[1] This fear of success has continued down to the present day, but while trading was an open group enterprise in which many individuals acquired wealth, success in that field came to be accepted more quickly than in the more individualistic work of farming. At the present time, commercial activities are carried on largely by individuals alone or in a limited partnership, and the practice, or at least the suspicion, of witchcraft in connexion with them seems to be on the increase. Some may feel that similar attitudes with regard to successful results from cultivation of the soil are now held less strongly than formerly, but [754] I know of no evidence to support such a feeling. One of the commonest traditional patterns for witchcraft is that of a partnership of a senior and a junior member—of parent and child, or of mother's brother and sister's son. That is one reason why urgent suggestions by an older person concerning choice of a profession by a younger are looked upon with disfavour among the Ovimbundu.

868 562 A child should be taught enough diligence and application in cultivating that he or she may not lack the necessities in later adult life. Every boy will take to trading and bargaining almost as naturally as eating, drinking, breathing, and sleeping. Commerce still retains so much of its former glamour that every boy will take it up if and when opportunity offers. The care of younger children comes even more naturally to the girl, and she must also learn the housekeeper's art. Many folk-tales and songs indicate a reluctance on the part of girls to dedicate themselves with diligence to cultivation. In the days of the rubber trade, when girls could also join caravans for the coast and to the interior as porters, there may have been some real basis for this, but at the present time girls are convinced and enthusiastic cultivators, almost 100 per cent.[2] The

THE OLD SOCIETY

The trade was conducted in caravans composed of up to several thousand people,[48] under the leadership of *entrepeneurs* called *olofumbelo* (of which the singular is *ofumbelo*). Of such were the individuals whom Serpa Pinto describes as earning wealth equivalent to a thousand pounds or more. Their role was to get together the caravans, to negotiate with the local political authorities, and to provide ritual leadership. The exact relationship between the *ofumbelo* and the ordinary members of the caravan is difficult to see. European travellers found that porters were content with low wages since they had opportunities for private trade, but apparently the caravan organizers had better opportunities for getting rich than had ordinary Ovimbundu. My informants stated that a man organized a caravan to gain wealth. A man who was in a position of prosperity would be known as an *ohwase* (rich man), would stay at home and be expected to assist his relatives.[49]

Different ages and both sexes participated in the trade. Childs says that boys from the age of nine upwards travelled on the caravans, and this is confirmed by Serpa Pinto.[50] Tucker, and my informants however, give the age when caravan travel began as being fifteen or over.[51] Unmarried girls travelled too, but simply acted as helpers to some male relative. The caravan organizers (*olofumbelo*) were old men, I was told, and travelled in the rear while in front of the caravan marched a young man (called the *kesongo*) who carried a flag.[52]

Dr. Childs states that between 1874 and 1886 rubber was gathered from the forests of the interior and took eight months (four months each way presumably) for the Ovimbundu to obtain. From 1886, however, 'red rubber' was obtained from the sandy lands beyond the Cuanza, a journey which only took three months altogether. Hence, Childs states, the trading

[48] A Bastos, *Monografia de Catumbella*, in *Bol. Soc. Geog. Lisboa* 1910 (p. 131) states that caravans of several thousand were used in the 1870s but that by the time of writing (1908–9, nearly the end of the trade) people came in small parties. My informants who would remember this period spoke of the large size of the caravans.

spent 10,000 escudos, he told me, in buying shells to trade in Kwanyama country and even if this be regarded as an exaggeration such an expedition will cost at least several hundred escudos.

I have not so far discussed labour migration and its economic consequences. There are three ways of going out to work: being recruited for 'contract labour', which involves selection by the chief and government headmen who send people to the post whence they are directed to wherever they are required; being recruited by labour-recruiters who visit villages with their lorries; and travelling, usually on foot, to find work. Contract labour is for a year, which may be followed by a fortnight's work at the post to which the *contratados* are returned. The coffee plantations of Amboim and Seles are important centres for voluntary labour from Gumba and neighbouring chiefdoms. Women, and boys from ten years up, go to work there for spells which may be only two months. However, even in Gumba whose people have a reputation for backwardness and for lack of enthusiasm for going away to work, there is nothing at all surprising in meeting men who have learnt a few words of English in Johannesburg.

Of the 36 household heads of Epalanga, 9 were women, and 8 were men who for one reason or another (elders, cripples, the catechist) would not leave the village. Of the other 19, 6 were absent as labourers during some part of my stay, and this figure excludes individuals who were not expected home within a year.

In the cities there are large numbers of permanently or semi-permanently urbanized Ovimbundu, who have largely lost contact with their home villages. Some people who have spent years in the towns may come home—in Epalanga there were at least five women who had visited cities.

Although almost all able-bodied men and many women have lived outside the context of village life as servants to Europeans, as labourers on plantations, and as urban workers, it would be a mistake to think of the rural areas of the Benguela Highland, as being labour reservoirs economically dependent on the towns. It seems that prices of manufactured goods are lower near the railway line and in the cities; hence a man returning from wage labour may buy cloths, a bicycle, a sewing-machine, or a
